

Passage Program Placement Initiative: Employers

Be Confident in Hiring New Talent

For many organizations the challenge of hiring and retaining cybersecurity talent can be a daunting endeavor. With close to 465,000 unfilled positions in North America and more than 3.5 million globally, organizations struggle to keep up with the demand to find and hire qualified talent.

While higher education and certification programs continue to develop the next generation of cybersecurity professionals, many graduates lack the hands-on experience needed to demonstrate job readiness with employers.

Employers utilizing the Placement Initiative can expect:

- To hire candidates with hands-on experience for critical cybersecurity jobs
- Confidence in hiring individuals who can support today's security business needs
- A streamlined and easy process to onboard individuals who have completed the program

Ready to hire from the Passage Program?

If you are looking to hire well-qualified, competent cybersecurity professionals for your organization, the Placement Initiative is here to help.

60% Have difficulty retaining cybersecurity staff

63% Unfilled vacancies on cybersecurity team

43% Organizations experiencing more cyber-attacks compared to 2021

ISACA State of Cybersecurity 2022 Report
